BUSINESS INTELLIGENCE • POWER BI

ATLIQ

BUSINESS INSIGHTS 360

From raw data to sharper business decisions

A multi-function analytics solution across Finance, Sales, Marketing, Supply Chain and Executive reporting.

PORTFOLIO PROJECT | ARPAN DAS

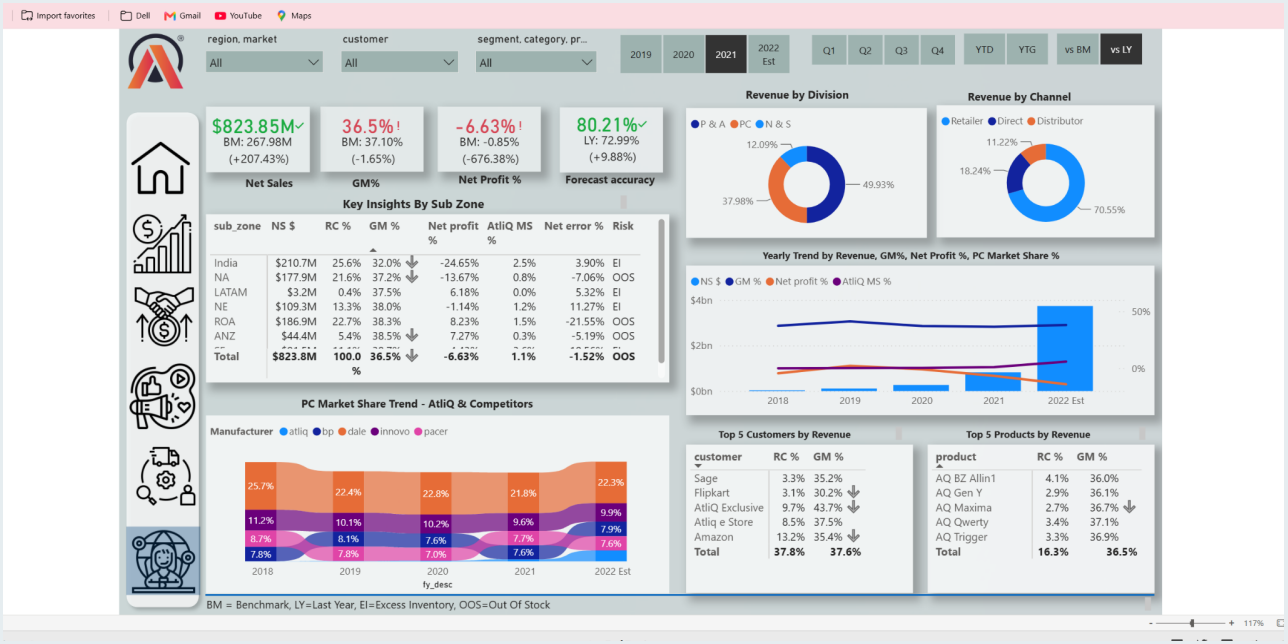

One connected view of business performance

THE BUSINESS NEED	Teams need more than isolated reports. They need a consistent view of revenue, margins, customers, products and operational risks.
PROJECT RESPONSE	A consolidated, interactive Power BI solution with five analytical perspectives.
DECISION SUPPORT	Explore revenue sources, sales-to-margin performance, customer and product mix, market priorities and forecast risk.

A practical analytics workflow

UNDERSTAND	Translate business questions into measurable KPIs.
PREPARE	Transform and shape source data in Power Query.
MODEL	Build relationships and a reusable analytical model.
MEASURE	Create DAX measures for business performance.
COMMUNICATE	Design interactive views for exploration and decisions.

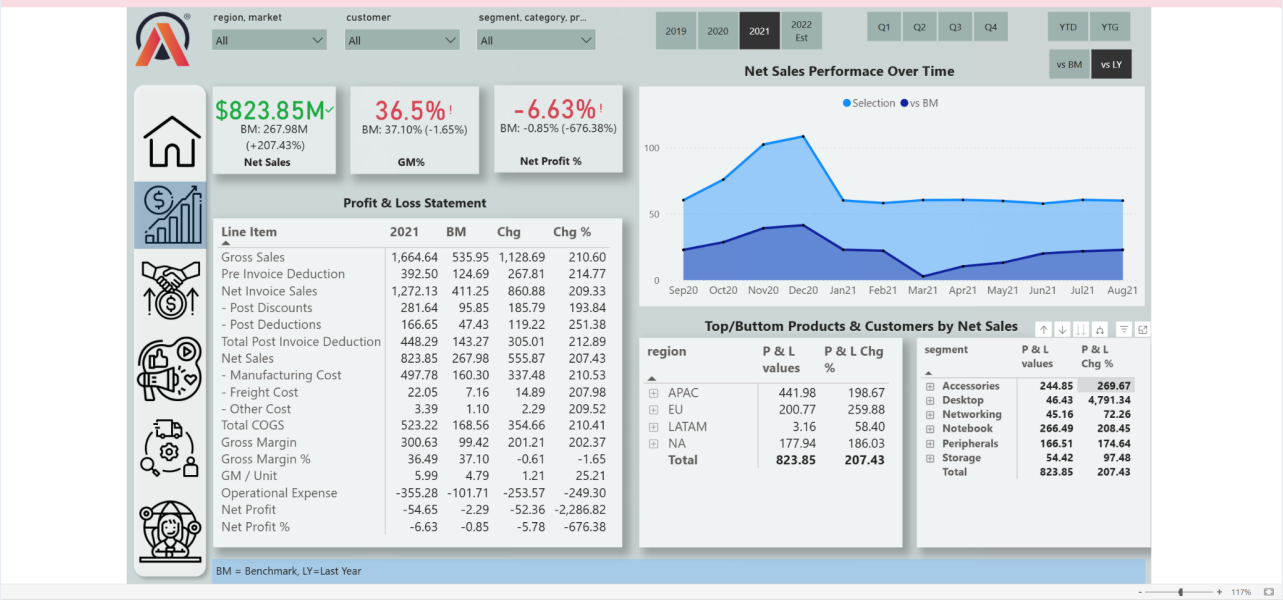

Executive Analytics

A leadership-level snapshot of sales, margin, profitability, channel mix and forecast accuracy.

- Net Sales and Gross Margin % at a glance
- Revenue mix across divisions and channels
- Market-share movement and key customer/product contributors

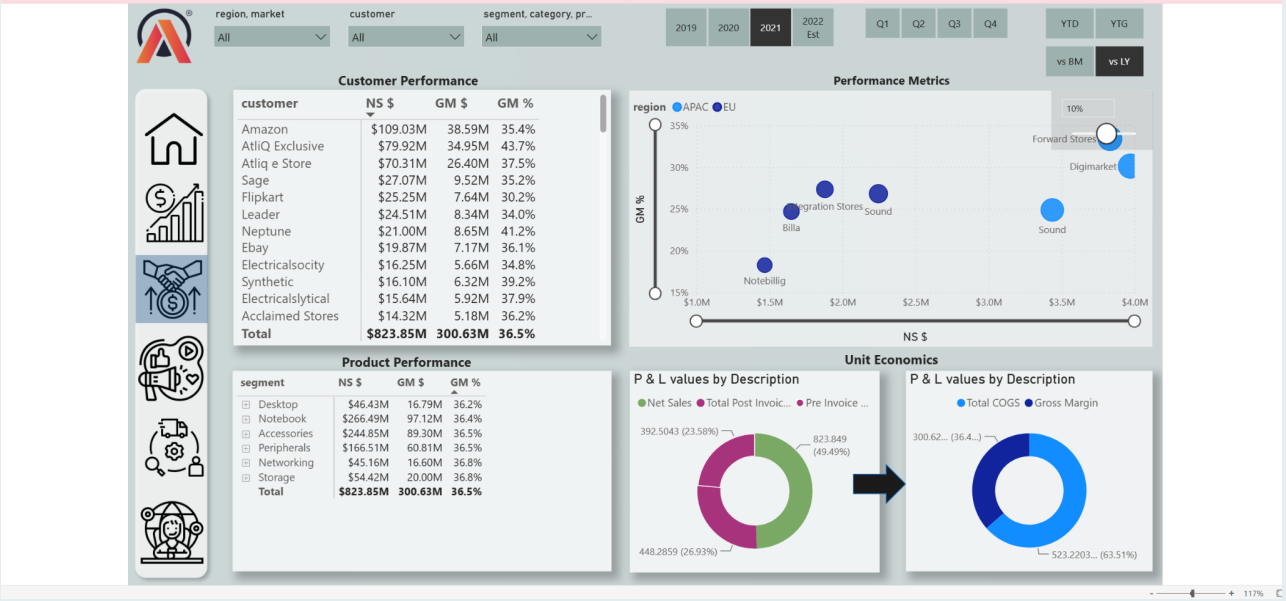

Finance Analytics

A closer look at the Profit & Loss structure and financial performance versus benchmark.

- Gross sales bridge through deductions to net sales
- Cost of goods sold, gross margin and operating expenses
- Net profit and margin highlight where performance needs attention

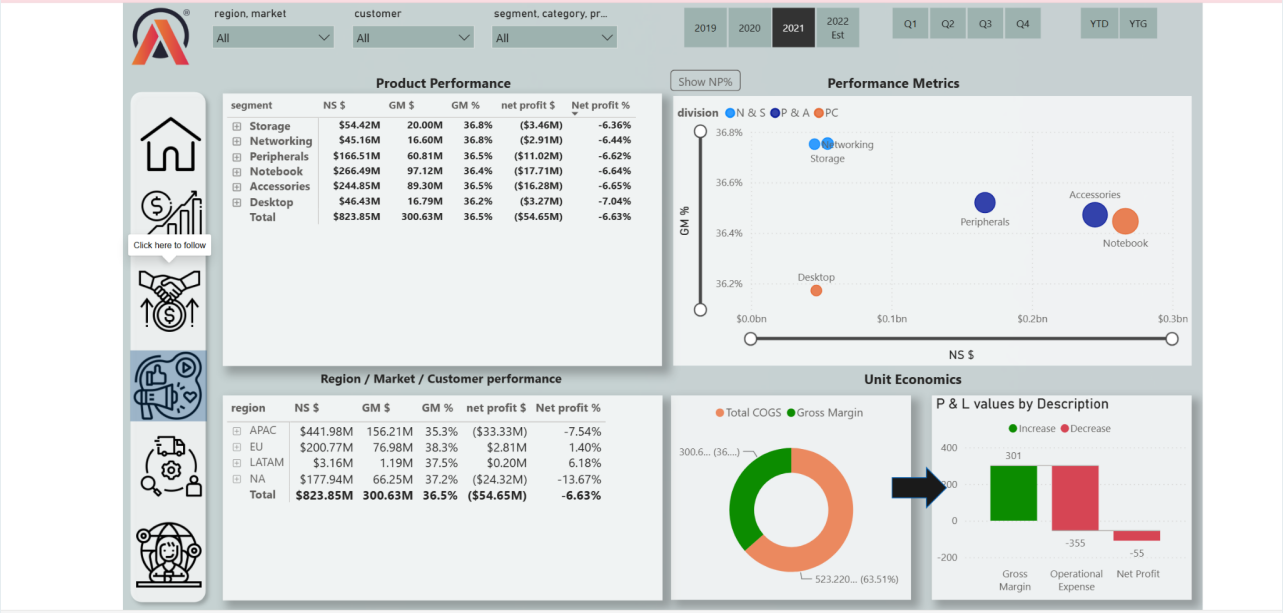

Sales Analytics

Explore customer, product, regional and segment performance to understand sales contribution.

- Customer and product performance tables
- Net sales and gross margin comparison
- Regional and segment-level performance patterns

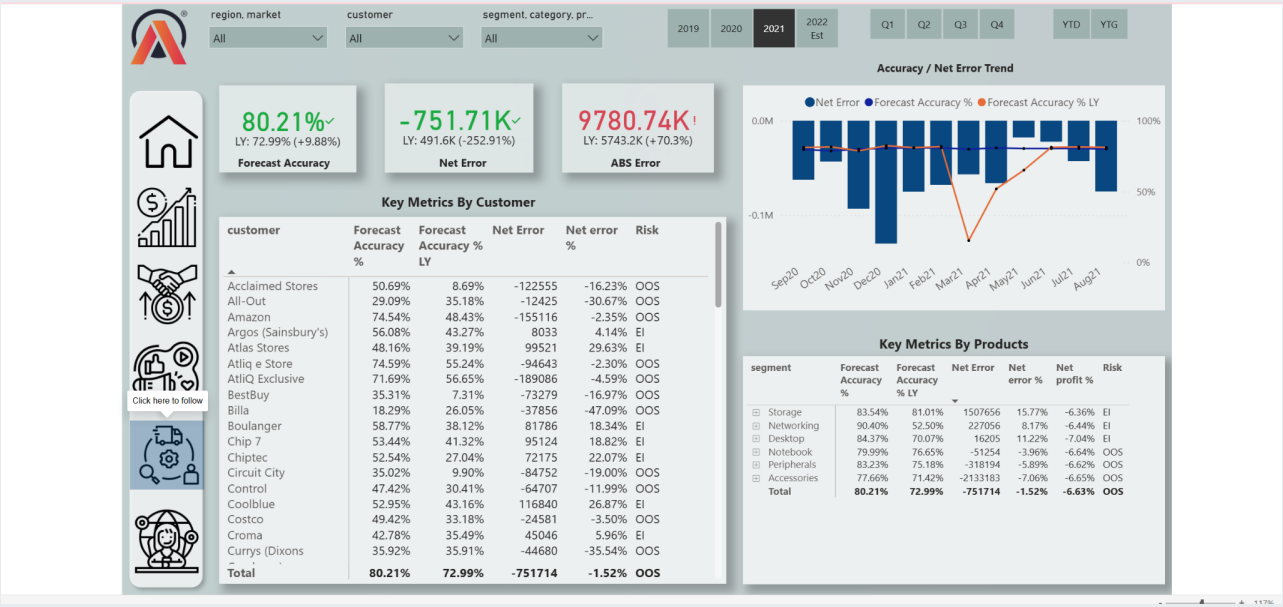

Marketing Analytics

Compare product and market performance using revenue, gross margin and net-profit indicators.

- Product segment contribution and profitability
- Market and region performance comparisons
- Unit-economics views to support prioritisation

Supply Chain Analytics

Monitor forecast quality and identify customers or products with potential inventory risk.

- Forecast accuracy, net error and absolute error KPIs
- Customer- and product-level forecast metrics
- Risk indicators including excess inventory and out-of-stock labels

Turning metrics into business questions

PROFITABILITY	Are sales growth and gross margin moving in the same direction?
CUSTOMER MIX	Which customers contribute most to revenue, and what is their margin profile?
PRODUCT MIX	Which product segments combine meaningful scale with healthy margins?
MARKET PRIORITY	Which regions show stronger performance and where is attention needed?
FORECAST RISK	Where do forecast errors signal possible excess inventory or stock-outs?

Understand the measures behind the visuals

Net Sales

Revenue after applicable invoice deductions and discounts.

Gross Margin

Net Sales minus cost of goods sold (COGS).

Gross Margin %

Gross Margin expressed as a percentage of Net Sales.

Net Profit %

Net Profit divided by Net Sales; indicates bottom-line profitability.

Forecast Accuracy

How closely forecast demand aligns with actual demand.

Net Error / Absolute Error

Forecast error direction and magnitude; useful for spotting planning issues.

What the analysis brings together

KEY TAKEAWAYS

A single view can connect financial, commercial and operational performance. Revenue alone is not enough; margin and profitability add context. Customer and product mix can reveal concentration and prioritisation opportunities. Forecast metrics can help teams investigate inventory and service risks.

INTERPRETATION NOTE

This is a portfolio case study built using the provided AtliQ dataset and learning brief. The dashboard supports exploration and discussion; recommendations should be validated with business owners, data definitions and operational context before real-world action.

Displayed figures are dataset outputs, not claims about a live company's current performance.

Skills demonstrated

POWER BI	Interactive report design • Drill-down exploration • KPI cards • Cross-filtering
POWER QUERY	Data cleaning • Transformation • Shaping • Repeatable preparation
DAX	Business measures • Ratios and percentages • Time and comparison logic
DATA MODELLING	Relationships • Analytical structure • Consistent metric definitions
BUSINESS ANALYSIS	Finance • Sales • Marketing • Supply Chain • Executive reporting

THANK YOU

I’m keen to discuss the business questions, KPI choices, data preparation and design decisions behind this project.
